One Stop Case Study

Redesigning a grocery convenience app for clarity, speed, and real shopper needs.

THE PROBLEM

Convenience stores aren't convenient online

One Stop serves everyday shoppers looking for quick wins — weekly deals, pantry staples, household basics. But the digital experience lagged behind that promise. Users had to hunt for promotions, couldn't quickly scan categories, and had no way to track favourites across sessions.

The challenge: design a mobile-first grocery app where deals are discoverable, categories are browsable in seconds, and the path from discovery to cart is frictionless.

"A convenience app should feel faster than going to the shop — not slower."

MARKET GAP

What competitors missed

MISSING ELSEWHERE

Weekly deals surfaced on homepage

MISSING ELSEWHERE

Mood/use-case based categories

MISSING ELSEWHERE

Persistent favourites across sessions

ONE STOP ADVANTAGE

Local deals + proximity to store

DESIGN THINKING

Four screens, one clear flow

1

Discover

Weekly deals on home s

2

Browse

3

Save

Heart items to a saved

4

Manage

Account, orders, addre

THE SCREENS

What each screen is doing

Home

Promotions lead the layout. The hero banner sets mood; weekly deal cards below remove the need to search. Shoppers who come in for one deal leave knowing about three more.

Categories

Large photograph-led tiles replace text lists. Visual groupings that match how people think about what they need, not how a database organises SKUs.

Favourites

A persistent saved list with heart indicators. Repeat purchases (bread, cheese, a favourite beer deal) require zero search time on return visits.

Weekly Deals

A full-page grid of this week's offers, clearly priced and badge-labelled, so deal-hunters don't have to scroll past anything irrelevant.

Account

Addresses, order history, payment methods, and settings grouped into clear sections. One sign-out button — unambiguous and accessible.

WHAT I LEARNED

Designing for speed has its own logic

Promotions are the product

For convenience shoppers, the deal IS the decision. Surface them immediately — don't bury them behind categories.

Images do the work of words

A photo of a pizza communicates faster than 'Frozen Foods' in a text list. Visual categories reduce cognitive load.

Repeat visits need memory

Favourites aren't a nice-to-have — they're the feature that turns a first-time user into a habit.

Navigation must cost nothing

Five tabs. Always visible. No dead ends. Every screen reachable in one tap from anywhere in the app.

*"A grocery app that finally respects your time —
you know what's on deal before you've even thought about a list."*

— Design goal, achieved

CLOSING

One Stop is a solo concept project designed in Figma.

All screens were created as part of a portfolio case study.
